**1** Efficiently approximating the minimum-volume bounding box of a point set in three dimensions
Gill Barequet, Sariel Har-Peled
January 1999 **Proceedings of the tenth annual ACM-SIAM symposium on Discrete algorithms**
Full text available: 📄 pdf(1.02 MB)      Additional Information: full citation, references, citings, index terms

   **Keywords:** approximation, bounding box

**2** A practical approach for computing the diameter of a point set
Sariel Har-Peled
June 2001 **Proceedings of the seventeenth annual symposium on Computational geometry**
Full text available: 📄 pdf(299.63 KB)      Additional Information: full citation, abstract, references, citings, index terms

   We present an approximation algorithm for computing the diameter of a point-set in $d$-dimensions. The new algorithm is sensitive to the "hardness" of computing the diameter of the given input, and for most inputs it is able to compute the {\em exact} diameter extremely fast. The new algorithm is simple, robust, has good empirical performance, and can be implemented quickly. As such, it seems to be the algorithm of choice in practice for computing/approximating the diameter.

**3** An anthropometric face model using variational techniques
Douglas DeCarlo, Dimitris Metaxas, Matthew Stone
July 1998 **Proceedings of the 25th annual conference on Computer graphics and interactive techniques**
Full text available: 📄 pdf(836.36 KB)     Additional Information: full citation, references, citings, index terms

   **Keywords:** anthropometry, crowd generation, face modeling, variational modeling

**4** A data-driven reflectance model
Wojciech Matusik, Hanspeter Pfister, Matt Brand, Leonard McMillan
